YONGGANG LI

Bachelor, Peking University, Beijing, China
yonggang.laurent.li@gmail.com

EDUCATION

Peking University Beijing, China
Bachelor of Philosophy (Track in Logic and Philosophy of Science) Aug 2022 – Jul 2026
University of Notre Dame Notre Dame, IN 46556, United States
Exchange Student, Department of Philosophy Aug 2024 – Dec 2024

RESEARCH INTERESTS

Human-AI Collaboration, Large Language Models, AI for Healthcare and Education, Explainable AI

RESEARCH EXPERIENCE

Research Assistant, HKUST VisLab Oct 2026 – Jan 2027
Full-time

RegulaTutor: A Theory-Informed Framework for Long-Term Personalized Learning
Yonggang Li, Boqian Han, Rui Sheng, Yushi Sun, Zixin Chen
First Author, Manuscript in Preparation

- Designed a theory-informed tutoring framework that connects historical learner evidence, learner interpretation, and personalized instructional policies using a cognitive, affective, metacognitive, and motivational (CAMM) framework.
- Developed PairRoute, an offline refinement procedure that distinguishes harness-level, model-level, and mixed failures using intermediate execution records to guide targeted system revisions and stage-level supervision.
- Evaluated RegulaTutor across model configurations, demonstrating improvements in historical-evidence accuracy, learner diagnosis, and judged teaching quality.

AIvidence: Reconciling Patient-Specific AI Explanations with Evidence-Based Medicine for Clinical Diagnosis
Second Author, IEEE VIS 2026 fast track to TVCG

- Contributed to the design and development of AIvidence, a visualization system that integrates patient-specific AI explanations with biomedical literature to support clinical diagnostic decision-making.
- Refined and implemented both frontend and backend components of the system through iterative collaboration with the research team.
- Contributed to manuscript preparation, including sections on research motivation, literature grounding, and formative study findings.
- Participated in the iterative design process informed by expert feedback and clinical requirements.

Supporting Daily Healthcare Decision-making Through Argumentation-Based Human-AI Interaction
First Author, Ongoing Research Project

- Leading an ongoing project exploring Toulmin's model of argumentation for transparent and trustworthy AI-assisted daily healthcare decision-making.

SKILLS

- **Software Development**: Frontend and backend implementation, iterative system development
- **AI/ML**: Personalized tutoring framework design, offline refinement, model evaluation
- **Research Methods**: Literature Review, Qualitative Research, Semi-structured Interviews, Thematic Analysis, Research Synthesis, Academic Writing
